

# User Manual

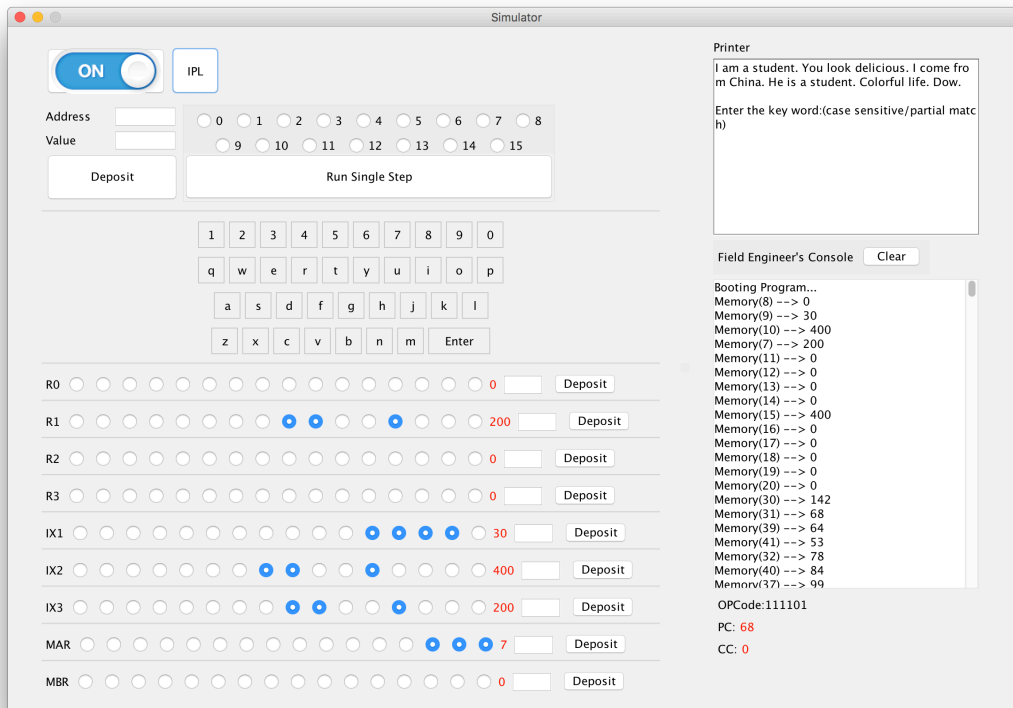

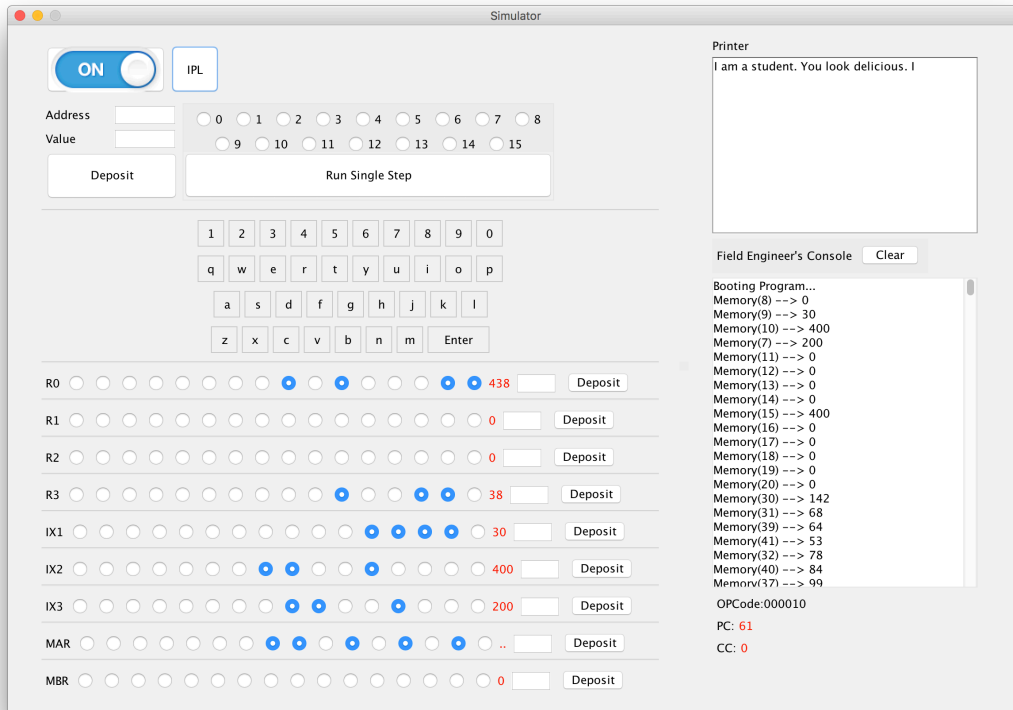

The Simulator system looks like this:  
Power Off:

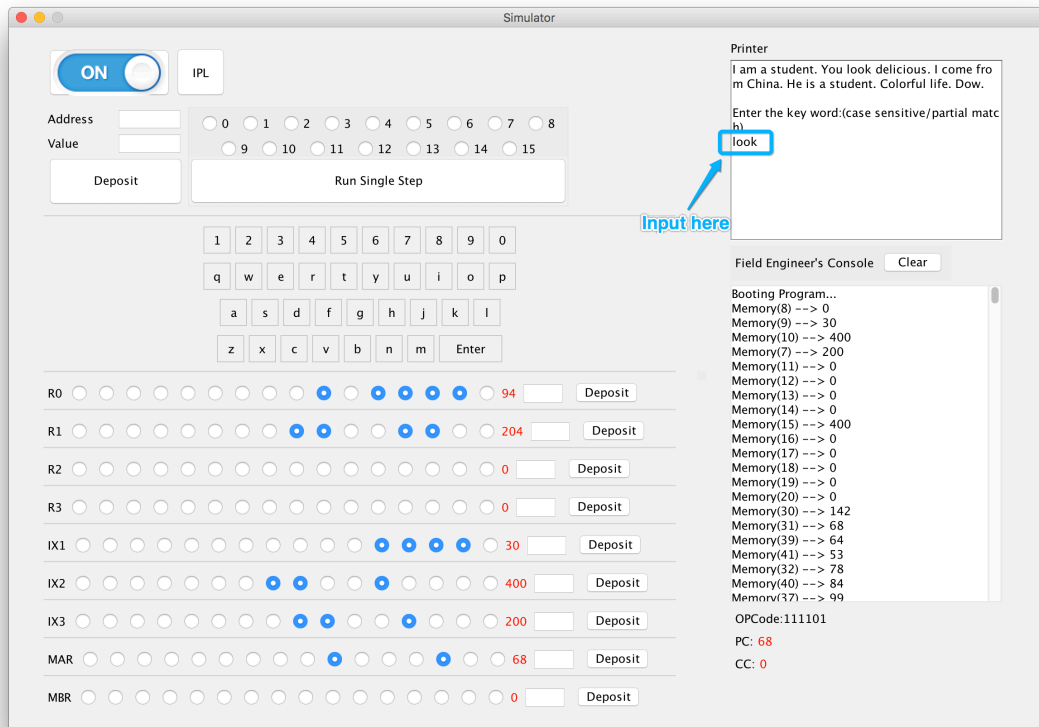

The whole system functions as the following manner:  
1. Click Power Button to initialize the simulator.

2. Click IPL Button to run the program (Read the sentences from file).

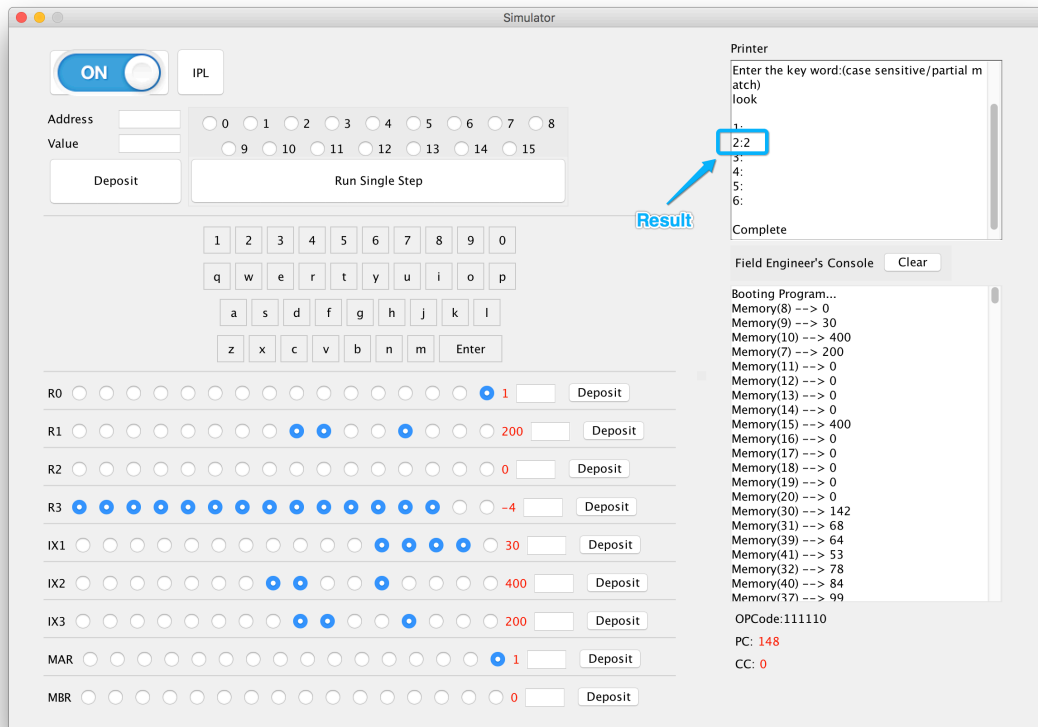

3. Input a number using the keyboard panel to specify which word to search. Then, press the enter button. (E.g. Input “look”.)

4. Then we could wait for the searching process, at the same time, the temporary results will be shown in the Printer, also the internal assembly code are in the Console.

5. The result is shown when the process ends. In this case, the word “look” is found in sentence #2, and it is the second word of the sentence.

6. Turn off the system.

Here, part 2 is done.
